

REMARKS

Applicants intended in the earlier amendment to highlight the dichotomy between coating and agglomeration as terms of art. The Examiner's explanation of "partially" coating in the Office action at page 3 (used in the physical phenomena sense of coating) illustrated the potential for misconstruing the amendment, and Applicants are grateful for the perspective since that would have unduly narrowed the invention. Accordingly, Claims 21 and 28 have now been amended to more closely hew to the invention described in the specification, for example, at page 10, lines 17-29.

Respectfully submitted,

May 17, 2011
